

# ALL YOU NEED TO KNOW

about Xpres Craft Self Adhesive Vinyl

1

Size and finalise artwork on screen and load self-adhesive vinyl onto your cutter. Send to cut.

2

Weed away the excess vinyl and apply application tape over the design making sure all areas are covered.

3

Using a squeegee rub over the application tape. Flip over and peel away the original backing.

4

Position your design on to the substrate and rub over with a squeegee to secure the self-adhesive vinyl in to place.

## HANDY TIP

Always place your design down onto the substrate in the middle first then work out. once in place use your hands to smooth out any ridges or bubbles in the vinyl.

## IMPORTANT!

Designs cut on self-adhesive vinyl do not have to be mirrored. Always make sure your blade is sharp and always make sure you do a test cut. See cut settings below for our self adhesive vinyl.

## REMEMBER

Cutting forces may vary depending on the age of the blade and its sharpness. Please bear this in mind every time and do a test cut.
